We preface this Hackathon presentation with a disclaimer to emphasize that the context and information are changing rapidly. We believe the strategies will evolve as each organization weighs the liabilities and considers what is right for the employees and stakeholders. As real estate professionals, we will work closely with our leaders and peers to create safe environments. One key consideration is “how we treat our employees will become a reflection of our brand”. This the world’s largest work at home experiment. According to Collier International, 70% of people who never worked at home prior to Covid-19, want to work at least 1 day a week (see graph below). We are learning new ways of working which will change the nature and the purpose of the workplace.
